

Automatic Discovery of Tactics in Spatio-Temporal Soccer Match Data

Tom Decroos

Jan Van Haaren

Jesse Davis

KDD'18

Meet Bob, an **analyst** at Everton FC

Meet Alan, the **coach** at Everton FC

What Bob's job
looks like now

We are playing Manchester City next week,
I need a summary of their tactics in 3 days!

Bob **manually** reviews many hours of soccer video footage

Thanks for you hard work.
Can you do it again for our next match?

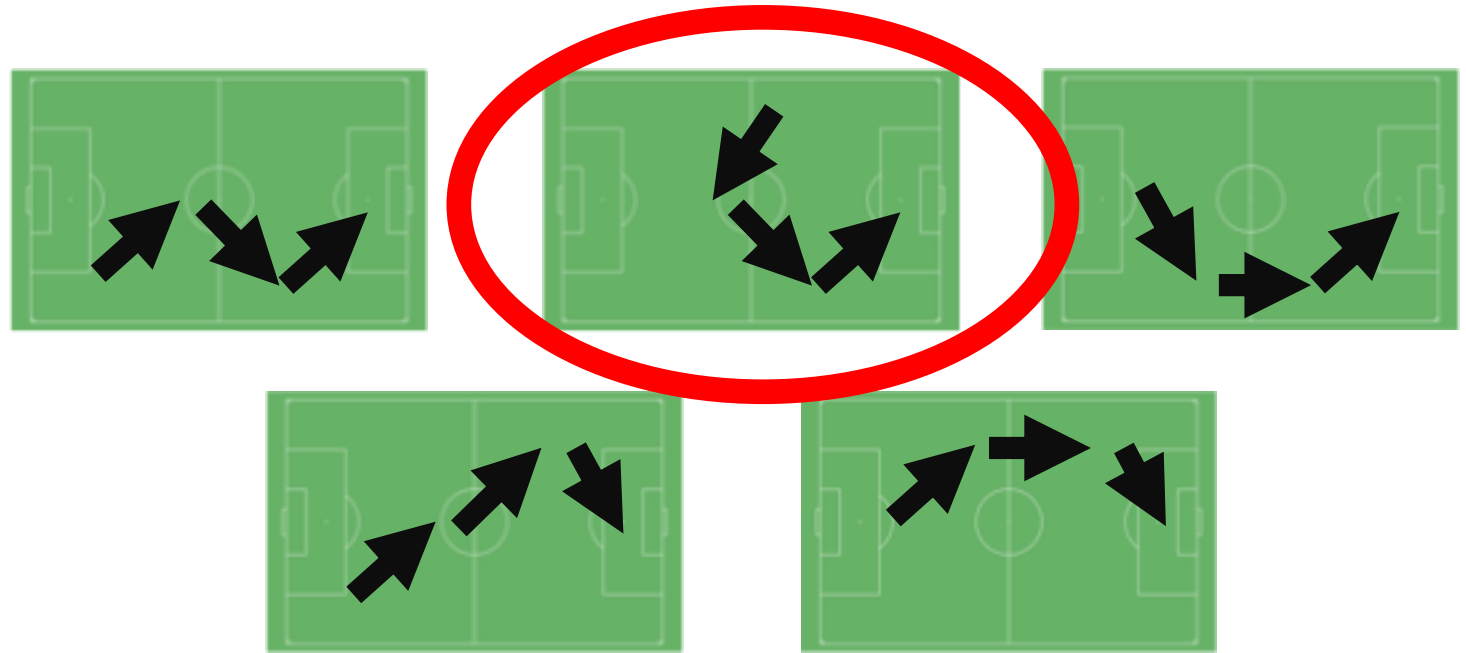

What Bob's job
should look like

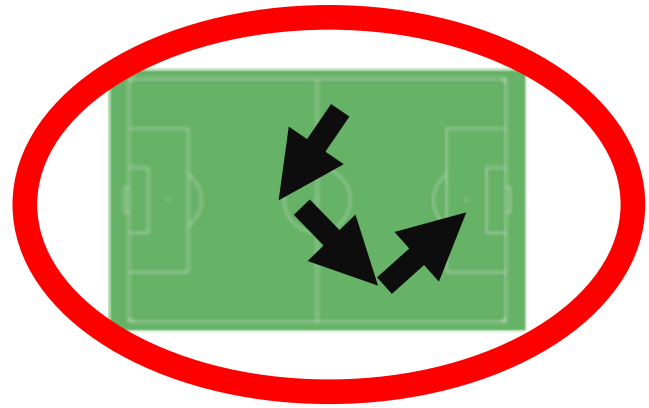

Computer, give me the top 5 tactics of Manchester City

Give me some examples of this tactic

Bob lets the computer
automatically discover tactics

Automatic discovery of tactics in spatio-temporal soccer match data

Data

Challenges

Approach

Results

Automatic discovery of tactics in spatio-temporal soccer match data

Data

Challenges

Approach

Results

A soccer match is described by a sequence of ± 1750 on-the-ball actions

A soccer match is described by a sequence of ± 1750 on-the-ball actions

	Pass
Time:	12min 36sec
Location:	(32.2, 85.1)
Player:	Neil Taylor
Team:	Swansea

Automatic discovery of tactics in spatio-temporal soccer match data

Data

Challenges

Approach

Results

Tactics involve space and time

Frequent itemsets : {Pass, Goal, Pass, Dribble, Tackle}

Tactics involve space and time

~~Frequent itemsets : {Pass, Goal, Pass, Dribble, Tackle}~~

Tactics involve space and time

~~Frequent itemsets : {Pass, Goal, Pass, Dribble, Tackle}~~

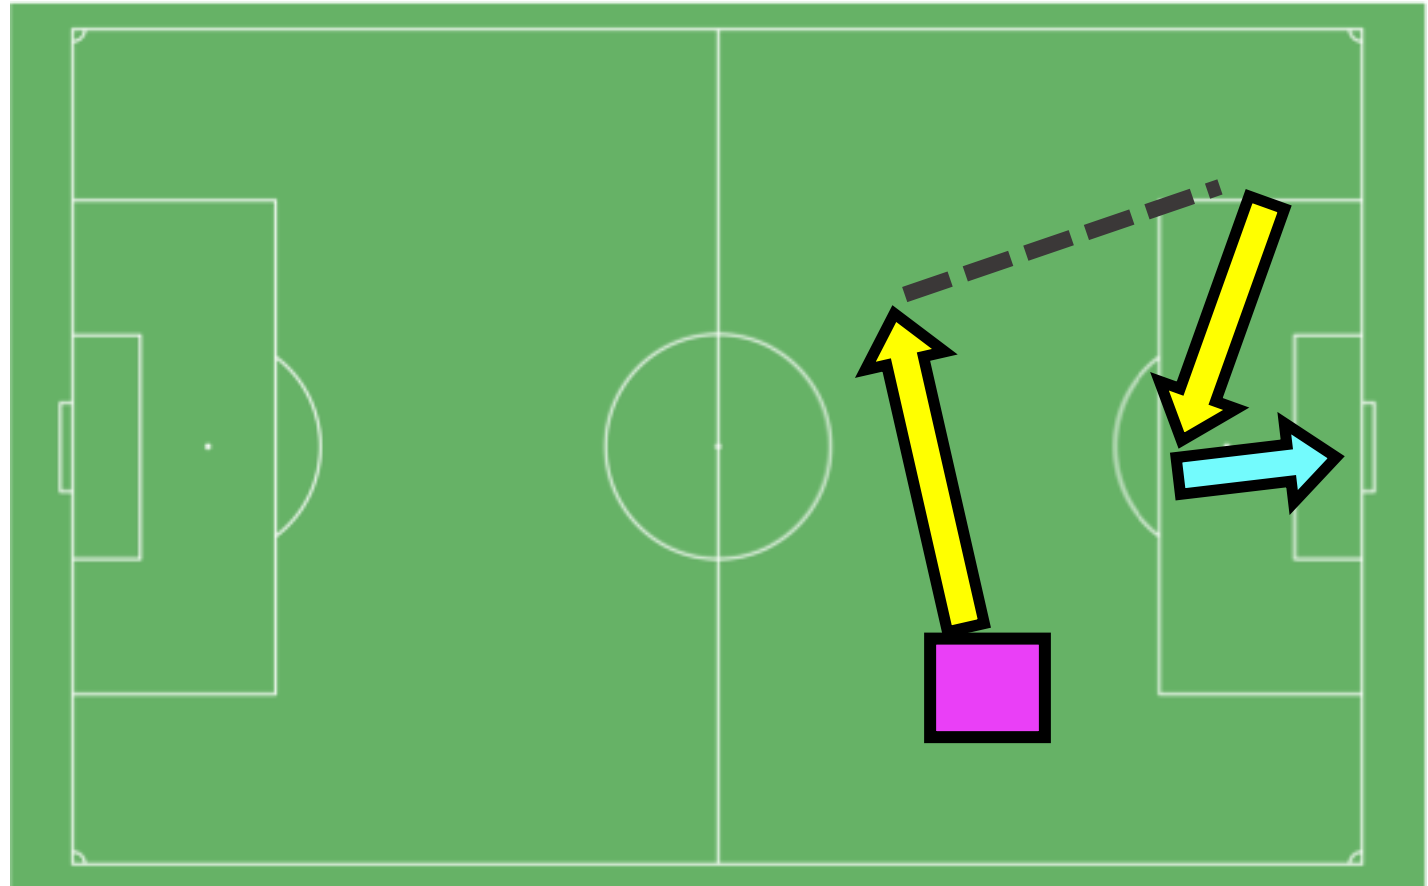

Tackle

⇒ Pass

⇒ Dribble

⇒ Pass

⇒ Goal

Events have discrete
and continuous attributes

Events have **discrete** and continuous attributes

Type: Pass

Player: Wayne Rooney

Team: Manchester United

Events have **discrete** and **continuous** attributes

How to exploit domain knowledge?

Raw data

- Player: Hazard
- Type: Pass

How to exploit domain knowledge?

Enriched raw data

- Player: Hazard -> **Left Winger** -> **Attacker**
- Type: Pass -> **Corner, Cross**

Relevance of tactics is subjective

Attackers care about **defence** patterns

Defenders care about **attack** patterns

Coaches care about **successful** patterns

Journalists care about **unique** patterns

Events have no universal definition

Events have no universal definition

Aggressive cross?

Events have no universal definition

Aggressive cross?

OR off-target shot?

Automatic discovery of tactics in spatio-temporal soccer match data

Data

Challenges

Approach

Results

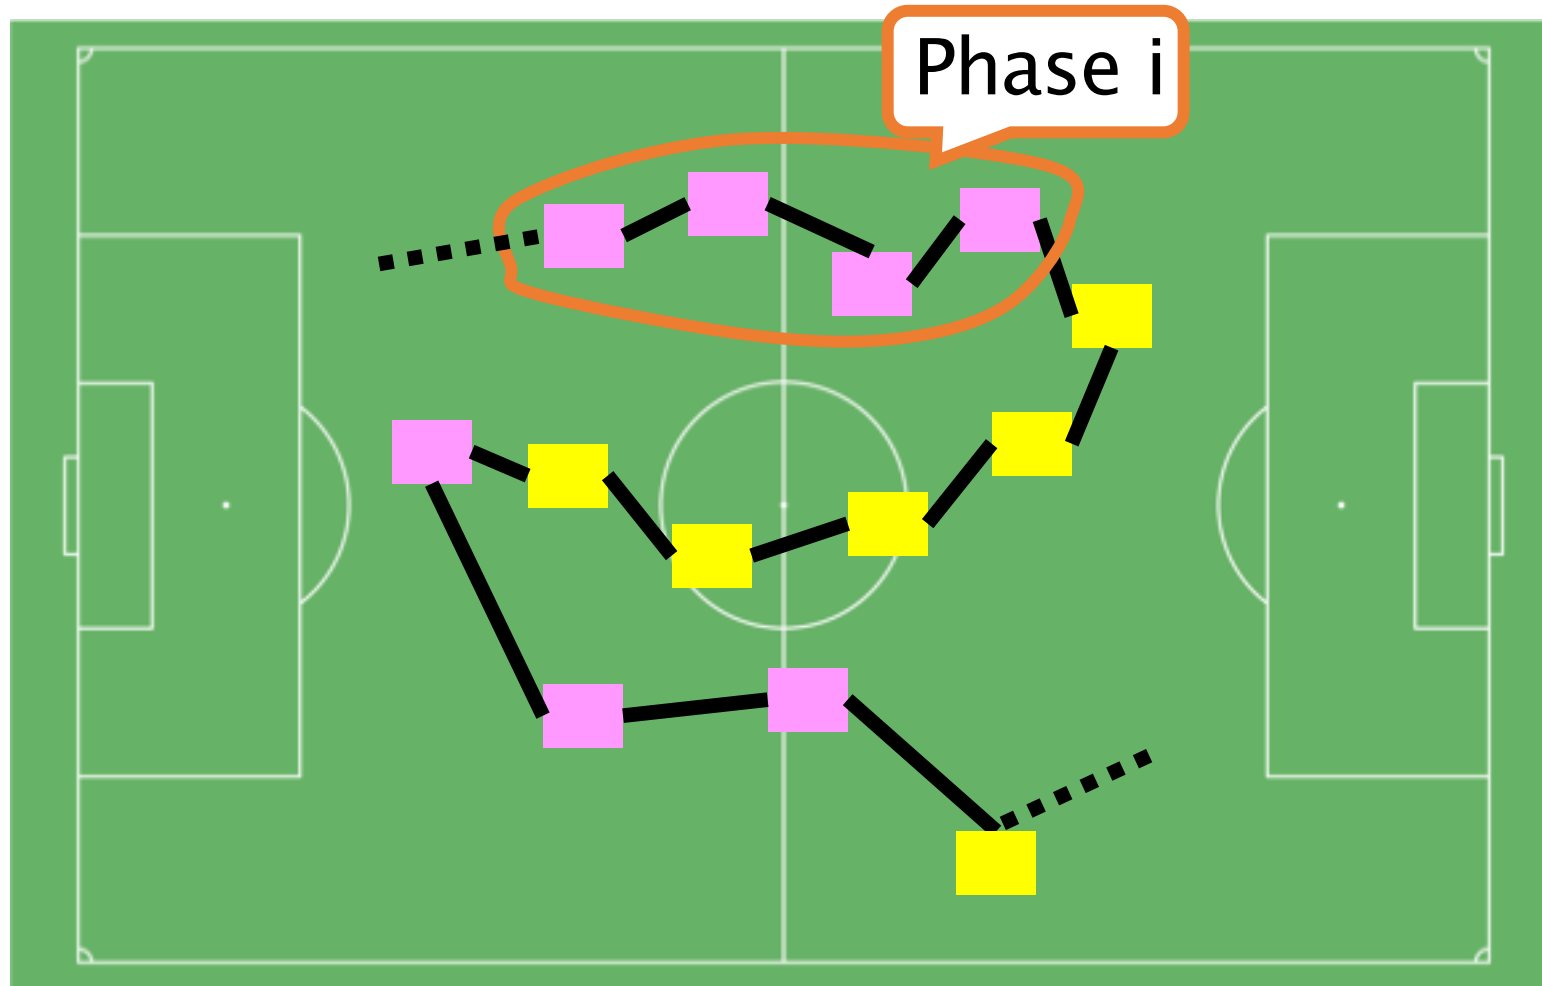

Step 1: Divide the event stream of each match into phases

Step 1: Divide the event stream of each match into phases

Step 1: Divide the event stream of each match into phases

Step 1: Divide the event stream of each match into phases

Step 1: Divide the event stream of each match into phases

Step 2: Cluster phases on their spatio-temporal component

Distance function =
Dynamic Time Warping

Parameter =
How many clusters?

Step 2: Cluster phases on their spatio-temporal component

Distance function =
Dynamic Time Warping

Parameter =
How many clusters?

Step 3: Rank clusters on user preference

Soccer coach

Journalist

Opposing player

Step 3: Rank clusters on user preference

Lots of shots!

Soccer coach

Unique phases

Journalist

Frequent phases

Opposing player

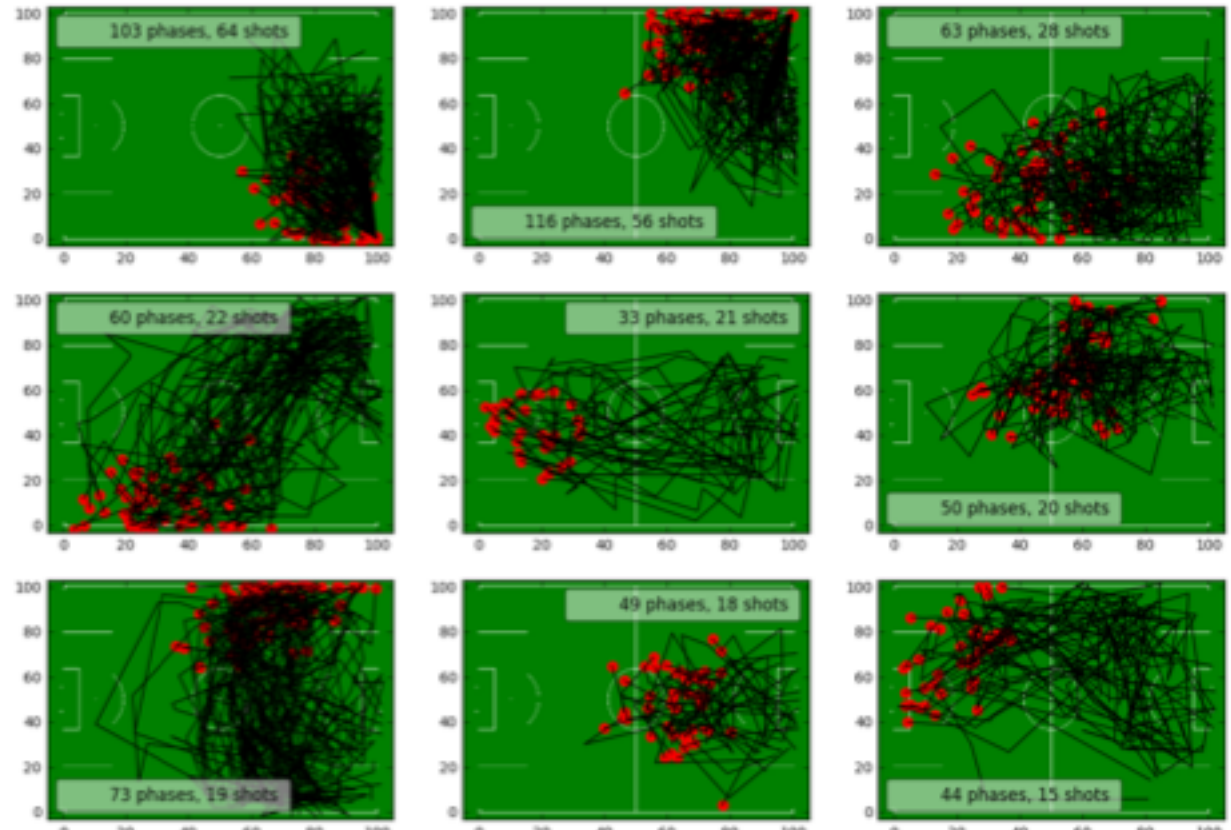

Step 3: Rank clusters on user preference

Lots of shots!

Soccer coach

9 clusters with most shots

Step 4: Mine each cluster for frequent sequential patterns

Sequential pattern mining algorithms (e.g. CM-SPADE) work on sequences of itemsets

Step 4: Mine each cluster for frequent sequential patterns

Sequential pattern mining algorithms (e.g. CM-SPADE) work on sequences of itemsets

Q: How to convert a soccer event to an itemset?

Step 4: Mine each cluster for frequent sequential patterns

Sequential pattern mining algorithms (e.g. CM-SPADE) work on sequences of itemsets

Q: How to convert a soccer event to an itemset?

q1: What information to consider?

Player/Event type/Location

Step 4: Mine each cluster for frequent sequential patterns

Sequential pattern mining algorithms (e.g. CM-SPADE) work on sequences of itemsets

Q: How to convert a soccer event to an itemset?

q1: What information to consider?

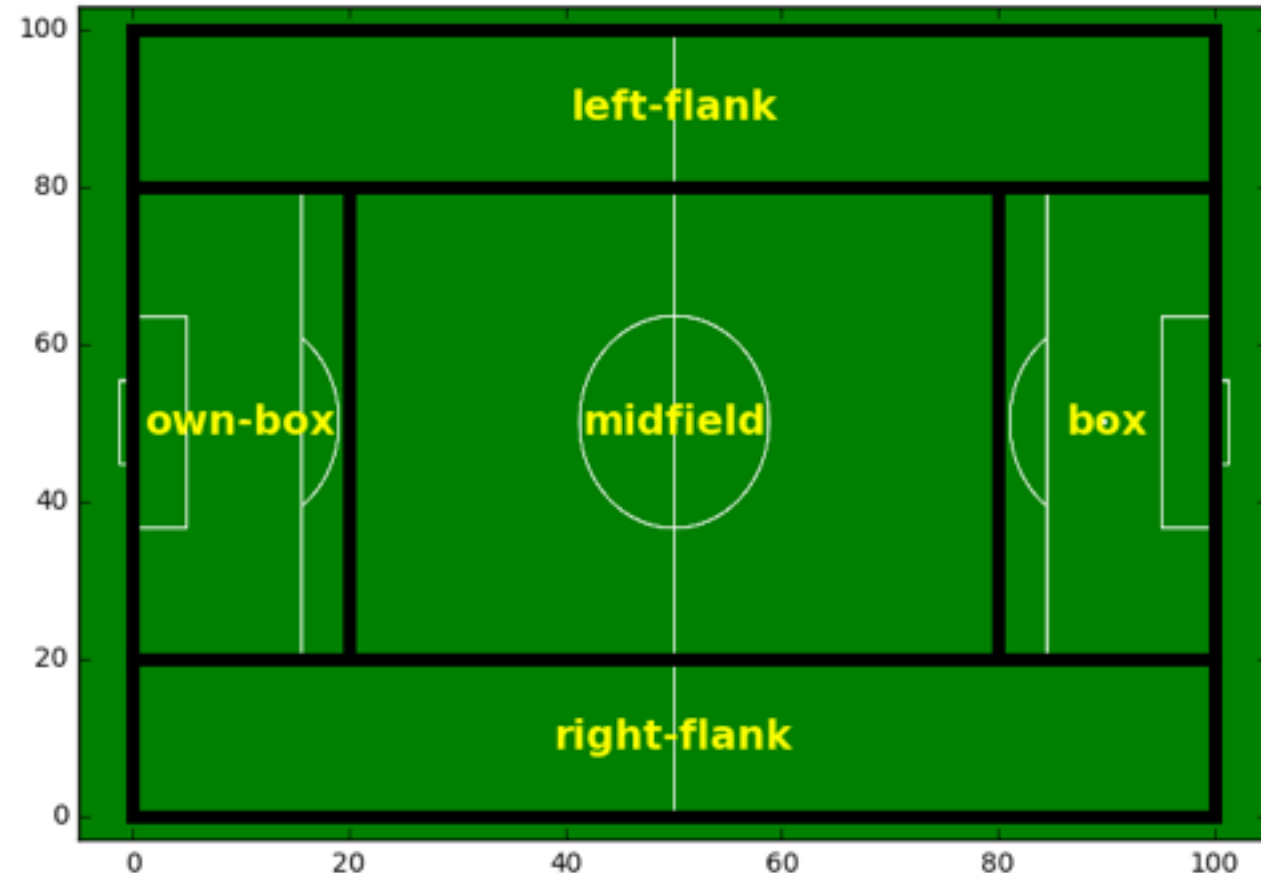

Player/Event type/Location

q2: How to encode this information?

Discretization? Hierarchy?

Step 4: Mine each cluster for frequent sequential patterns

Location discretization based on domain knowledge

Step 4: Mine each cluster for frequent sequential patterns

1. Interception AT the right flank
2. Ball recovery AT the right flank
3. A pass FROM the right flank TO the right flank
4. A pass FROM the right flank TO the midfield
5. A pass FROM the midfield TO the midfield
6. A pass OR long ball FROM the midfield TO the box
7. A pass FROM the box TO the box
8. Attempt saved AT the box
9. Shot AT box

Step 4: Mine each cluster for frequent sequential patterns

2. Ball recovery AT the right flank

4. A pass FROM the right flank TO the midfield

6. A pass OR long ball FROM the midfield TO the box

9. Shot AT the box

Step 4: Mine each cluster for frequent sequential patterns

Ball recovery AT the right flank

⇒ A pass FROM the right flank TO the midfield

⇒ A long ball FROM the midfield TO the box

⇒ Shot AT the box

Step 5: Rank patterns on user preference

Shots!

Soccer coach

Unique patterns

Journalist

Frequent patterns

Opposing player

Step 5: Rank patterns on user preference

Shots!

Soccer coach

Step 5: Rank patterns on user preference

Shots!

Soccer coach

$$W_{\text{ball_recovery}} = 1$$

$$W_{\text{pass}} = 0.5$$

$$W_{\text{shot}} = 2$$

Step 5: Rank patterns on user preference

Shots!

Soccer coach

Ball recovery AT the right flank

⇒ A pass FROM the right flank TO the midfield

⇒ A long ball FROM the midfield TO the box

⇒ Shot AT the box

$$W_{\text{ball_recovery}} = 1$$

$$W_{\text{pass}} = 0.5$$

$$W_{\text{shot}} = 2$$

Step 5: Rank patterns on user preference

Shots!

Soccer coach

Ball recovery AT the right flank

⇒ A pass FROM the right flank TO the midfield

⇒ A long ball FROM the midfield TO the box

⇒ Shot AT the box

$$W_{\text{ball_recovery}} = 1$$

$$W_{\text{pass}} = 0.5$$

$$W_{\text{shot}} = 2$$

$$\text{Score}(p) = \text{Support}(p) * (1 + 0.5 + 0.5 + 2)$$

Automatic discovery of tactics in spatio-temporal soccer match data

Data

Challenges

Approach

Q1: Do we discover interesting and relevant patterns?

Top ranked cluster
of Manchester City
in 2015/2016

Q1: Do we discover interesting and relevant patterns?

4th ranked cluster
of Manchester City
in 2015/2016

Q2: Can we identify team tactics?

Top ranked patterns
in clusters of
Arsenal

Cluster	Sequential Pattern
2 nd Cluster	<ol style="list-style-type: none">1. A pass OR cross FROM the left flank TO the box2. Shot
3 rd Cluster	<ol style="list-style-type: none">1. A pass FROM the midfield TO the midfield2. A pass FROM the midfield TO the midfield3. A pass FROM the midfield TO the midfield
9 th Cluster	<ol style="list-style-type: none">1. A pass FROM the midfield TO the midfield2. A pass FROM the midfield TO the left-flank3. A pass FROM the left flank TO the midfield4. A pass FROM the midfield TO the midfield5. A pass FROM the midfield TO the midfield

Q2: Can we identify team tactics?

Top ranked patterns
in clusters of
Leicester City

Cluster	Sequential Pattern
1 st Cluster	<ol style="list-style-type: none">1. A pass OR cross FROM the left flank TO the box2. A shot
2 nd Cluster	<ol style="list-style-type: none">1. A pass OR cross FROM the right flank TO the box2. A shot and a Miss3. Ball goes out of bounds
7 th Cluster	<ol style="list-style-type: none">1. A ball recovery IN the midfield2. A shot

Conclusion

Have we made Bob's job easier?

Conclusion

Have we made Bob's job easier?

Not yet, but it's a good start!
